- A. /Users/Shared/
- B. /Users/tom/Public/
- C. /Users/harriet/Public/
- D. /Users/harriet/Public/Drop Box/

Answer: C

18. The primary role of the master password in Mac OS X v10.5 is to let you _____.

- A. access all the passwords stored in a local keychain
- B. reset the password of an account that has FileVault enabled
- C. change the startup device by holding down the Option key while the computer starts up
- D. connect to any password-protected web server whose password is stored in a local keychain

Answer: B

19. What are TWO reasons a system administrator might choose to store user accounts on a directory server?(Choose TWO - partial credit possible.)

- A. So that users can access their FileVault-protected home directories quickly.
- B. So that users can access a variety of services using the same account credentials.
- C. So that the admin user can manage user accounts centrally on the directory server, rather than individually on each client workstation.
- D. So that the admin user can implement Windows-style hashes for SMB/CIFS file sharing; hashes are supported for directory accounts, but not for local accounts.
- E. So that the admin user can use parental controls to manage users; parental controls restrictions can only be implemented on accounts stored on a directory server.

Answer: BC

20. Which statement presents a benefit of protected memory?

- A. Applications that crash automatically save open files.
- B. Data in memory used by running applications is encrypted.
- C. Applications that crash have the data in memory saved to a new file.
- D. Applications that crash do not adversely affect other running applications.

Answer: D
